

# Webhook Push Record BioClock.id

Panduan URL WEBHOOK Pada Cloud Server **VPS/Hosting**

## I. CONTOH FUNCTION PHP INCOMING URL WEBHOOK

1. Download contoh url webhook yang sudah kami siapkan di menu “Support->Q&A Webhook Push Record” pada bioclock.id

2

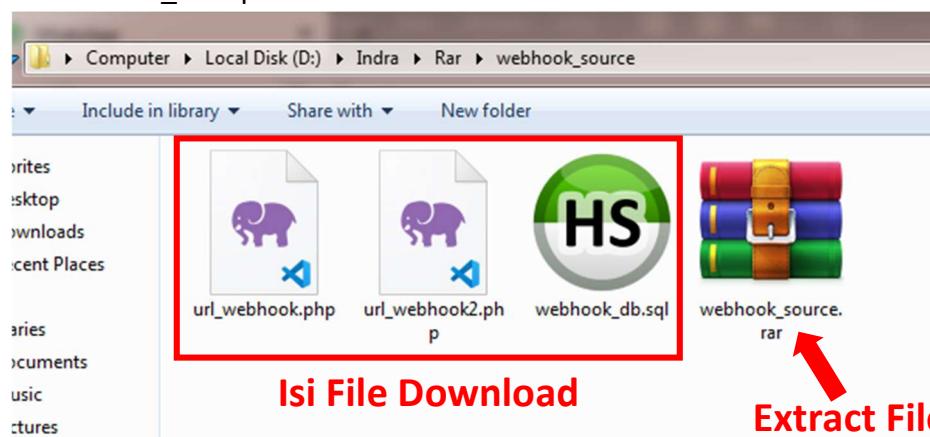

Apakah ada contoh program PHP sebagai URL Webhook  
Berikut contoh program PHP pada server penerima, url\_webhook.php

```
$dbkoneksi = mysqli_connect('localhost', 'root', '');
$dbopen1 = mysqli_select_db($dbkoneksi, 'webhook');
if ($dbopen1 == 1) {
    $json_result = stripslashes(file_get_contents('php://input'));
    $arjson = json_decode($json_result);
    if (!empty($arjson)) {
        echo "OK";
        $insert = mysqli_query($dbkoneksi, "INSERT card_hook (datajs) VALUES ('");
        if ($arjson->biohook == 'clockreco') {
            // do something
            ...
            ...
        } elseif ($arjson->biohook == 'clockfoto') {
            // do something
            ...
            ...
        } else {
            echo "EMPTY";
        }
    } else {
        echo "ERROR";
    }
}
```

Catatan :  
Setelah data JSON diterima, wajib dijawab "OK", jika tidak maka server bioclock.id akan terus mengirim berulang-ulang hingga dijawab "OK"  
Source program berikut database bisa [download disini](#)

3

2. File Download adalah “webhook\_source.rar”
3. Extract File “webhook\_source.rar” akan tampil 2 source code php “url\_webhook.php” dan 1 Database “webhook\_db.sql”

Isi file url\_webhook.php untuk test koneksi ke database sbb :

\*Ubah User, Password, dan nama Database sesuai yang digunakan pada Hosting/VPS anda

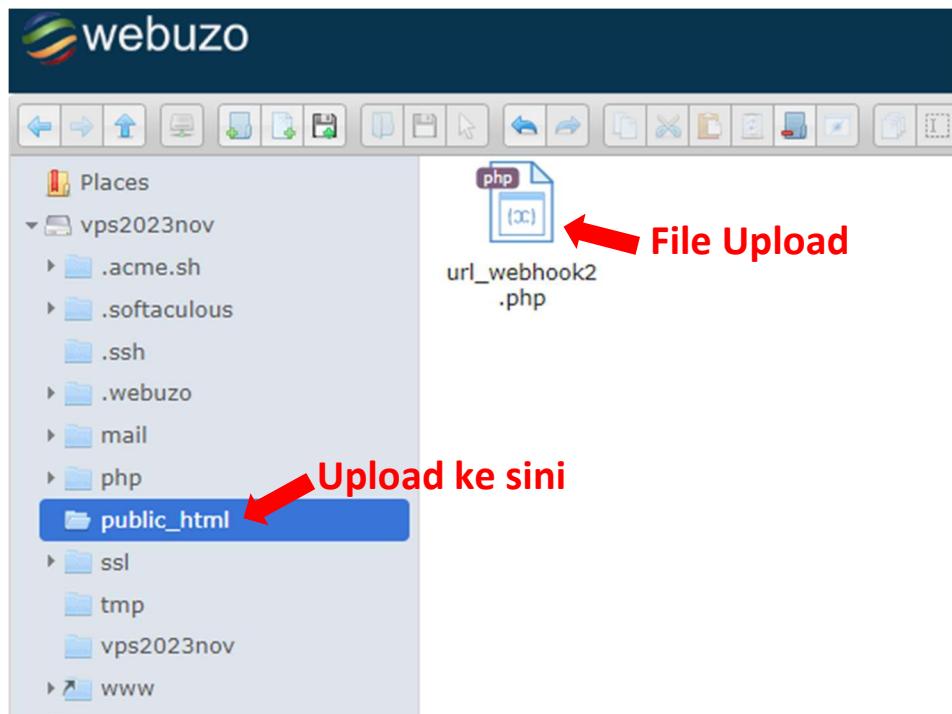

```
<?php
header("Content-Type:text/plain");
$dbkonek = mysqli_connect("localhost", 'root','');
$dbopen1 = mysqli_select_db($dbkonek, 'webhook');
if ($dbopen1 == 1) {
    $json_result = stripcslashes(file_get_contents('php://input'));
    $arjson = json_decode($json_result);
    if (!empty($arjson)) {
        echo "OK";
        $insert = mysqli_query($dbkonek, "INSERT card_hook (datajs)
        if ($arjson->biohook == 'clockreco') {
            // do something
        } elseif ($arjson->biohook == 'clockfoto') {
            // do something
        }
    } else {
        echo "EMPTY";
    }
} else {
    echo "ERROR";
`
```

Isi file url\_webhook2.php untuk test koneksi dan tambah data yang dikirim ke database sbb :  
\*Ubah User, Password, dan nama Database sesuai yang digunakan pada Hosting/VPS anda

```
<?php
header("Content-Type:text/plain");
$dbkonek = mysqli_connect("localhost", 'root', '');
$dbopen1 = mysqli_select_db($dbkonek, 'webhook');
if ($dbopen1 == 1) {
    $json_result = stripcslashes(file_get_contents('php://input'));
    $arjson = json_decode($json_result);
    if (!empty($arjson)) {
        // send response OK immediately
        echo "OK";
        $insert = mysqli_query($dbkonek, "INSERT card_hook (datajs)
VALUES ('$json_result')");
        if ($arjson->biohook == 'clockreco') {
            // do something
            $creadt = date('Y-m-d H:i:s', time());
            $mesisn = $arjson->biopush->device;
            $tranid = $arjson->biodata->tran_id;
            $userid = $arjson->biodata->user_id;
            $dispnm = $arjson->biodata->disp_nm;
            $trandt = $arjson->biodata->tran_dt;
            $statid = $arjson->biodata->stateid;
            $verify = $arjson->biodata->verify;
            $workco = $arjson->biodata->workcod;
            $ismask = $arjson->biodata->is_mask;
            $bodyte = $arjson->biodata->bodytem;
            $insert = mysqli_query($dbkonek, "INSERT card_reco
(create_dt,mesin_sn,tran_id,user_id,disp_nm,tran_dt,stateid,verify,workc
od,is_mask,bodytem) VALUES
('$creadt','$mesisn','$tranid','$userid','$dispnm','$trandt','$statid','
$verify','$workco','$ismask','$bodyte')");
        } elseif ($arjson->biohook == 'clockfoto') {
            // do something
        }
    } else {
        echo "EMPTY";
    }
} else {
    echo "ERROR";
}
```

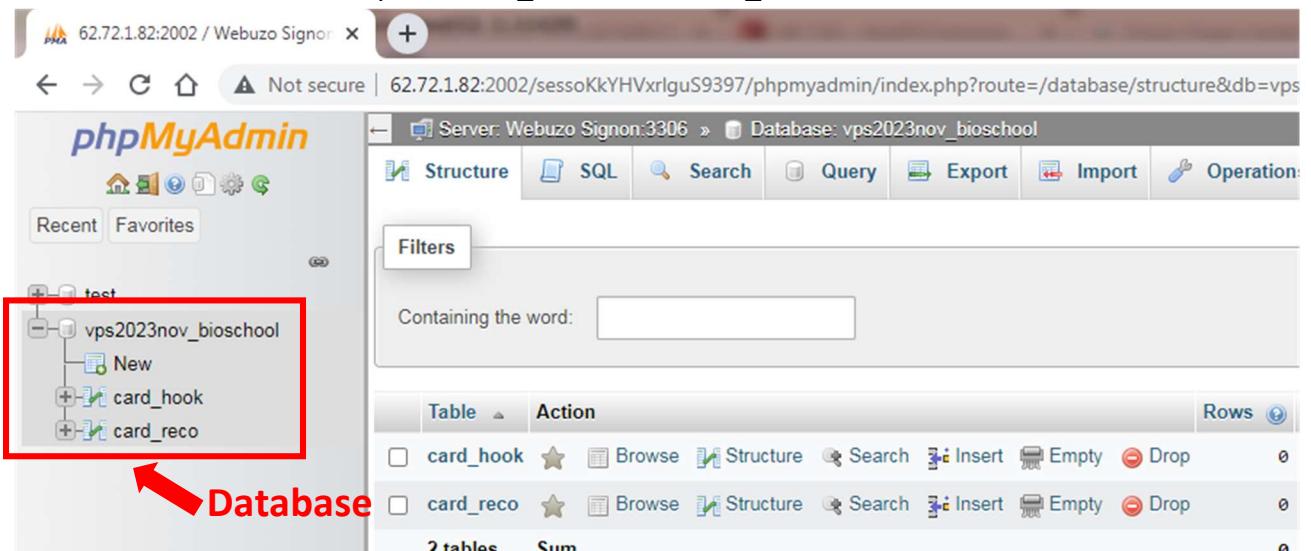

## II. CARA PASANG FUNCTION URL WEBHOOK DI HOSTING/VPS

1. Upload file "url\_webhook2.php" ke Hosting/VPS anda dalam folder public\_html

2. Load Database "webhook\_db.sql" pada Hosting/VPS anda

3. Database berisi 2 tabel yaitu "card\_hook" dan "card\_reco"

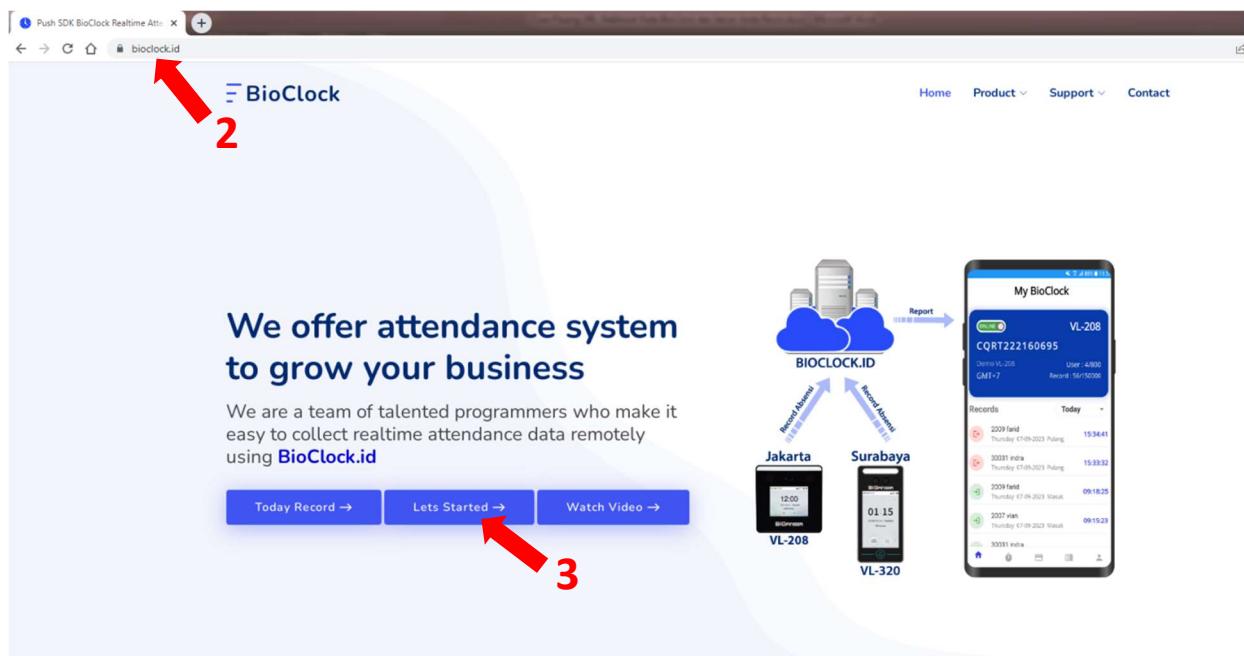

### III. CARA PASANG URL WEBHOOK PADA BIOCLOCK.ID

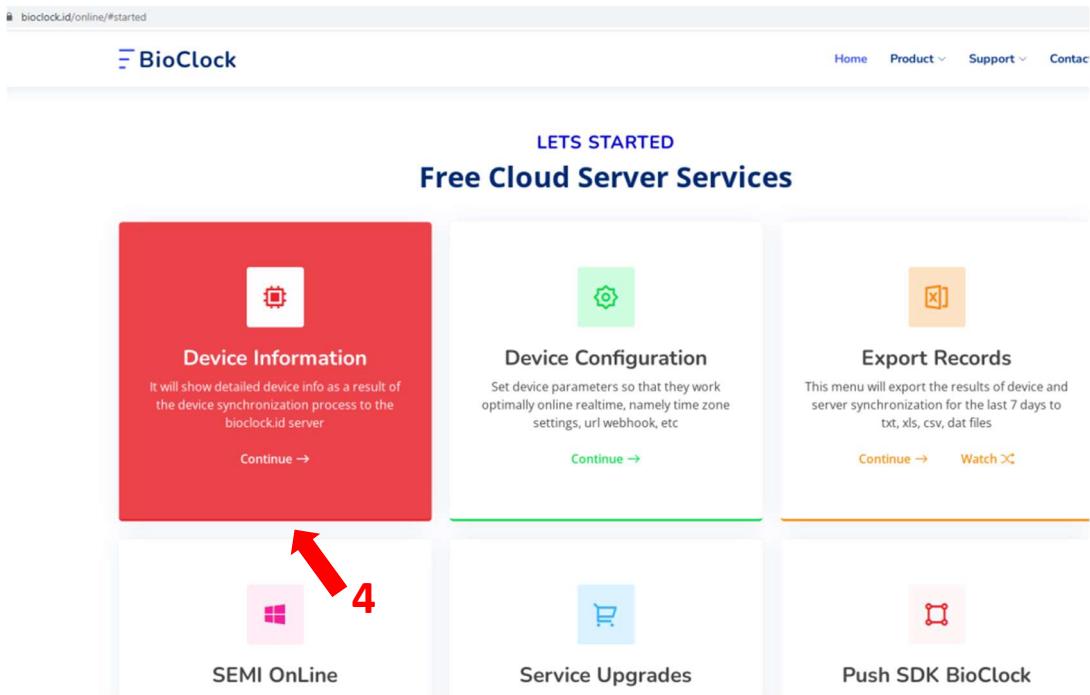

- Pertama hubungkan mesin dengan bioclock.id:  
Masuk menu mesin, lalu isikan alamat cloud server : bioclock.id

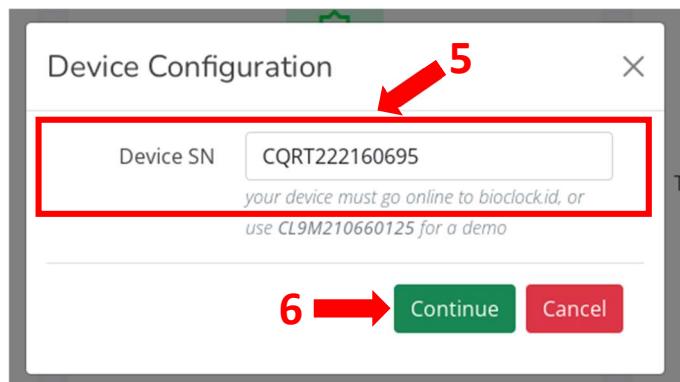

- Selanjutnya buka browser, ketik alamat server : bioclock.id
- Kemudian klik tombol “Lets Starter”

4. Klik tombol “Continue” pada menu “Device Information”

5. Isi SN Mesin : [Mesin milik anda]
6. Kemudian klik tombol “Continue”

7. Cek Menu “Last Syncron” menunjukan Tanggal dan Jam Sinkron Terakhir Mesin pada bioclock.id pastikan Jam dan Tanggal sesuai dengan waktu pada saat anda melakukan test

The screenshot shows a modal window titled "Device Information". It contains two sections of data tables:

Device SN	CQRT222160695	Last Syncron	<b>15-01-2024 11:47</b>
Brand Type	BIOFINGER VL-208	Record Age	60 Days
Verification	,,2,,,5,,,9	Last Record	138
Public IP	139.228.91.30	Last User	5
Local IP	192.168.1.105	Last Finger	0
Firmware	ZMM510-NF-Ver1.0.21	Last Face	5
Push SDK	2.4.1	Last Palm	0
Device BioKey	KTCuOlKh/XPskyUum7Kjel8=		

Invoice	Purchase Date	Order ID	Transaction	Amount (Rp)	Status	Virtual Account	Bank

**Tutup** button at the bottom right.

8. Kemudian klik tombol “Continue” pada menu “Device Configuration”

The screenshot shows the second step of a three-step process titled "Free Cloud Server Services". The steps are:

- Device Information
- Device Configuration
- Export Records

The "Device Configuration" step is highlighted with a green icon and a red arrow pointing to the "Continue →" button. The other steps are shown with their respective icons and descriptions.

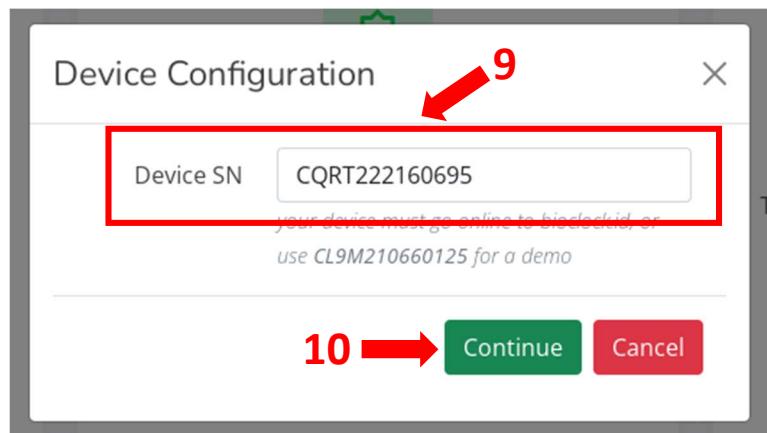

Device Information	Device Configuration	Export Records
It will show detailed device info as a result of the device synchronization process to the bioclock.id server	Set device parameters so that they work optimally online realtime, namely time zone settings, url webhook, etc	This menu will export the results of device and server synchronization for the last 7 days to txt, xls, csv, dat files
<b>Continue →</b>	<b>Continue →</b>	<b>Continue →</b> <b>Watch ➔</b>

SEMI OnLine	Service Upgrades	Push SDK BioClock
Download BioFinger Clock Software and Connection Driver to calculate attendance	Buy professional service upgrades to maximize the performance and features of the	Communication between servers uses the HTTP protocol, the Push Webhook method

9. Isi SN Mesin : [Mesin milik anda]

10. Kemudian klik tombol “Continue”

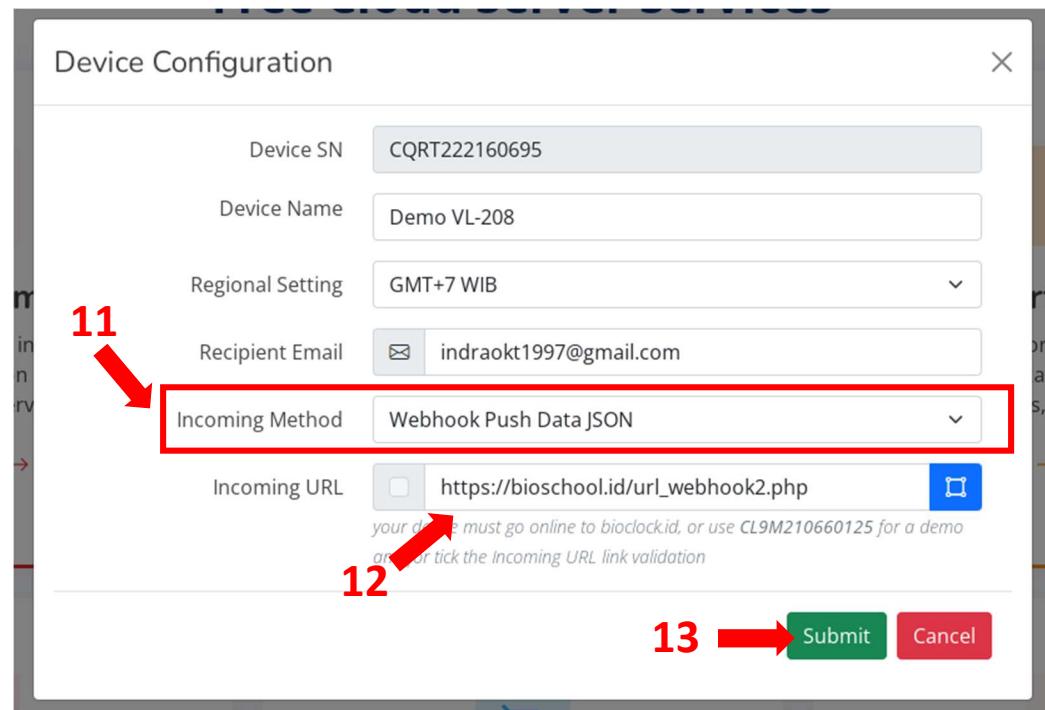

11. Pilih Incoming Method menjadi “Webhook Push Data JSON”

12. Selanjutnya isi Incoming URL: [milik anda]

Contoh Domain : [https://yourdomain.com/url\\_webhook2.php](https://yourdomain.com/url_webhook2.php)

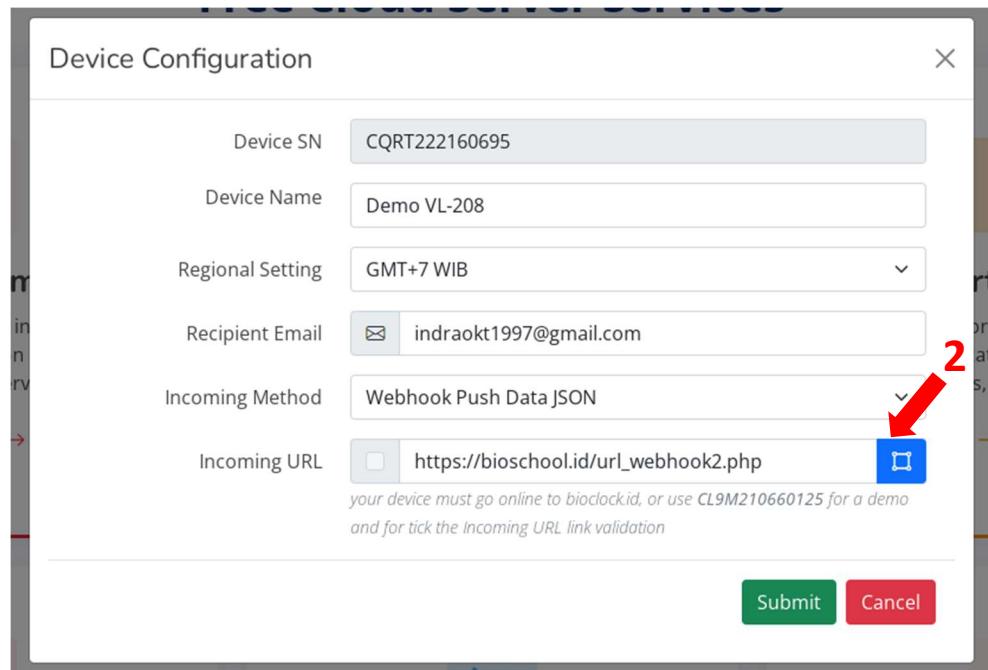

Contoh IP : [https://140.15.15.15/url\\_webhook2.php](https://140.15.15.15/url_webhook2.php)

13. Lalu klik tombol “Submit” untuk menyimpan

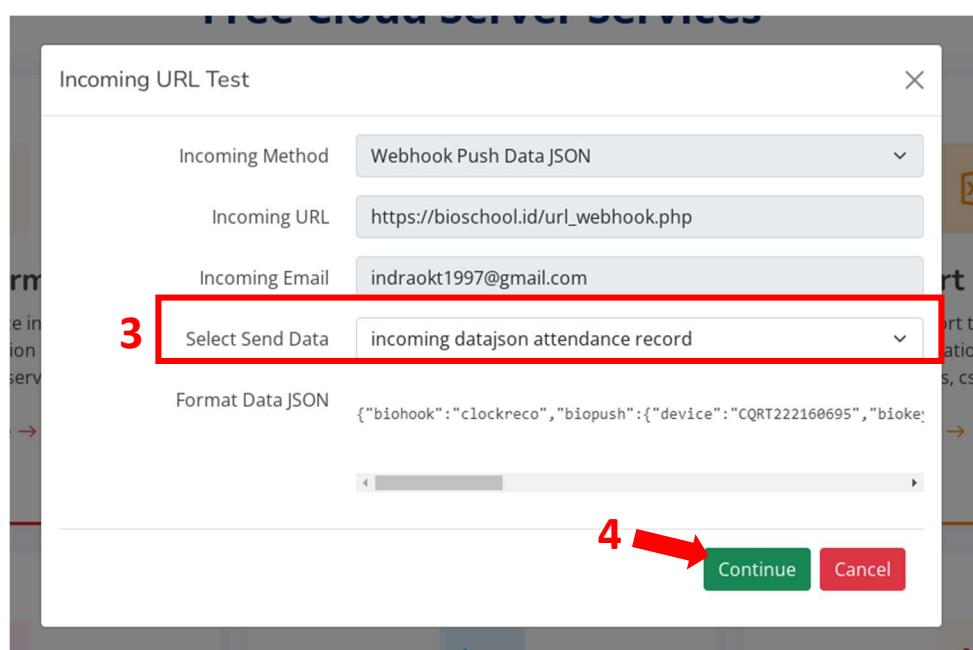

#### IV. CARA VERIFIKASI CENTANG BIRU ALAMAT INCOMING URL WEBHOOK

1. Buka kembali menu “Device Configuration” -> Isi SN Mesin
2. Kemudian klik “Tombol Biru” disamping kanan Incoming URL

3. Pada Select Send Data Pilih “incoming datajson record kehadiran”
4. Kemudian klik tombol “Continue”

5. Jika data dapat diterima oleh URL Webhook, maka otomatis muncul centang biru di samping kanan Incoming URL, yang artinya alamat URL sudah valid untuk bisa berkomunikasi antar server

The image consists of two screenshots from a software interface.

The top screenshot shows a confirmation dialog box titled "Sukses!" (Success!) with the message "Proses Anda SUKSES Testing Kirim Data JSON". It features a green checkmark icon and an "OK" button.

The bottom screenshot shows the "Device Configuration" dialog box. It contains the following fields:

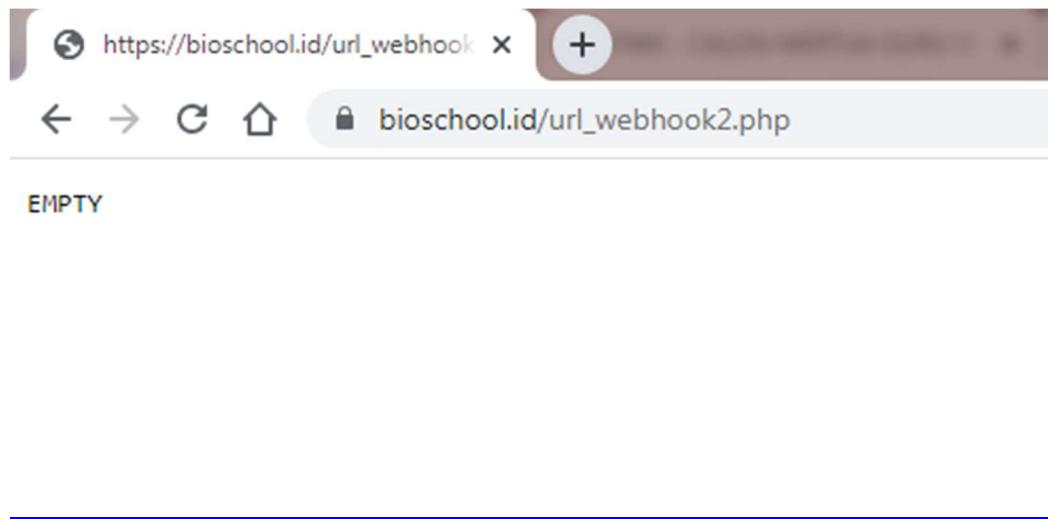

- Device SN: CQRT222160695
- Device Name: Demo VL-208
- Regional Setting: GMT+7 WIB
- Recipient Email: indraokt1997@gmail.com
- Incoming Method: Webhook Push Data JSON
- Incoming URL: [https://bioschool.id/url\\_webhook2.php](https://bioschool.id/url_webhook2.php) (This field has a blue checked checkbox to its left, highlighted with a red arrow and labeled "Centang Biru" (Blue Check).)

A small note below the URL field reads: "your device must go online to bioclock.id, or use CL9M210660125 for a demo and for tick the Incoming URL link validation".

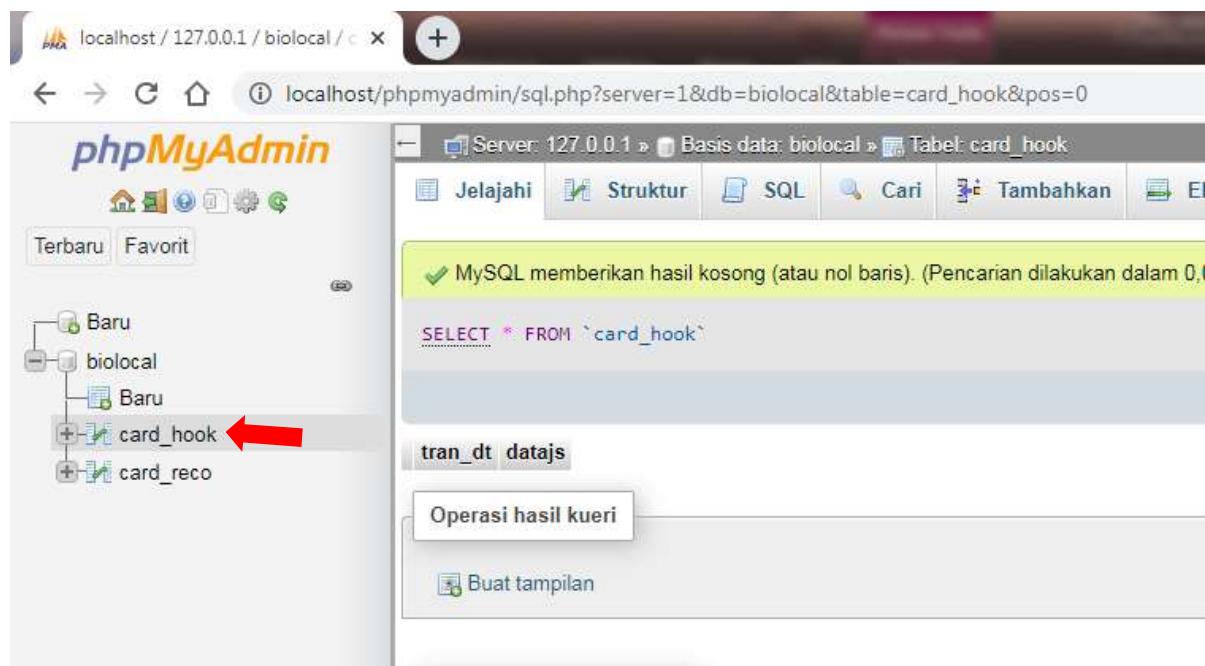

At the bottom right of the dialog are "Submit" and "Cancel" buttons.

## V. TESTING URL WEBHOOK PAKAI MESIN ABSENSI PADA SERVER SENDIRI

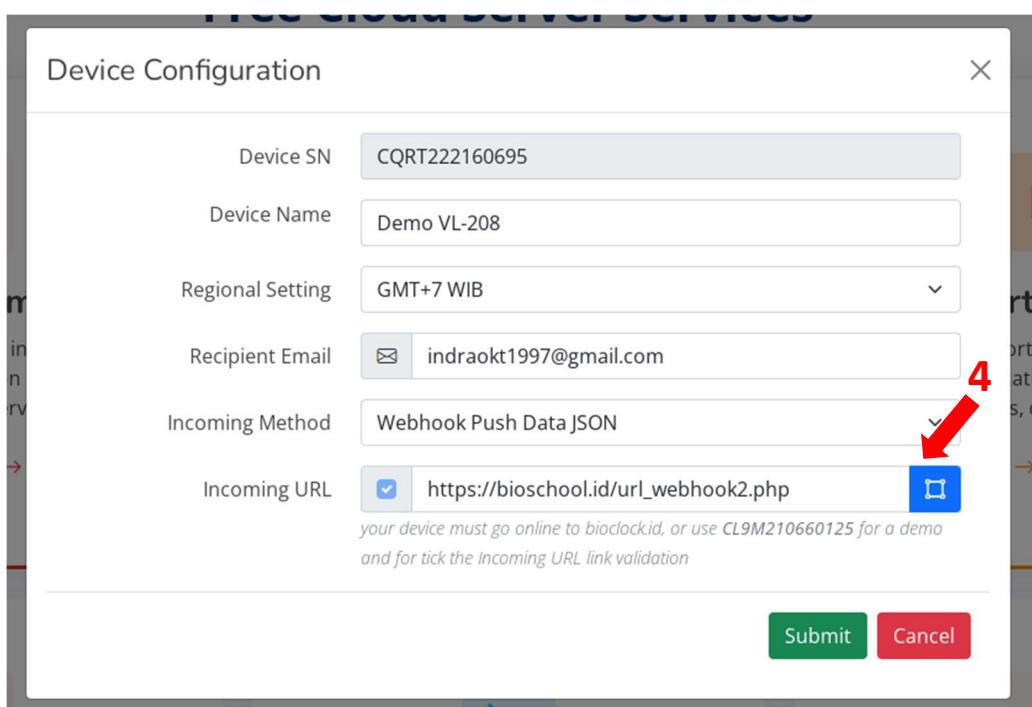

- Pertama buka halaman website lokasi url\_webhook anda  
Contoh Domain : [https://yourdomain.com/url\\_webhook2.php](https://yourdomain.com/url_webhook2.php)  
Contoh IP : [https://140.15.15.15/url\\_webhook2.php](https://140.15.15.15/url_webhook2.php)  
\*Jika mucul "EMPTY" maka koneksi antara database dan file url berhasil

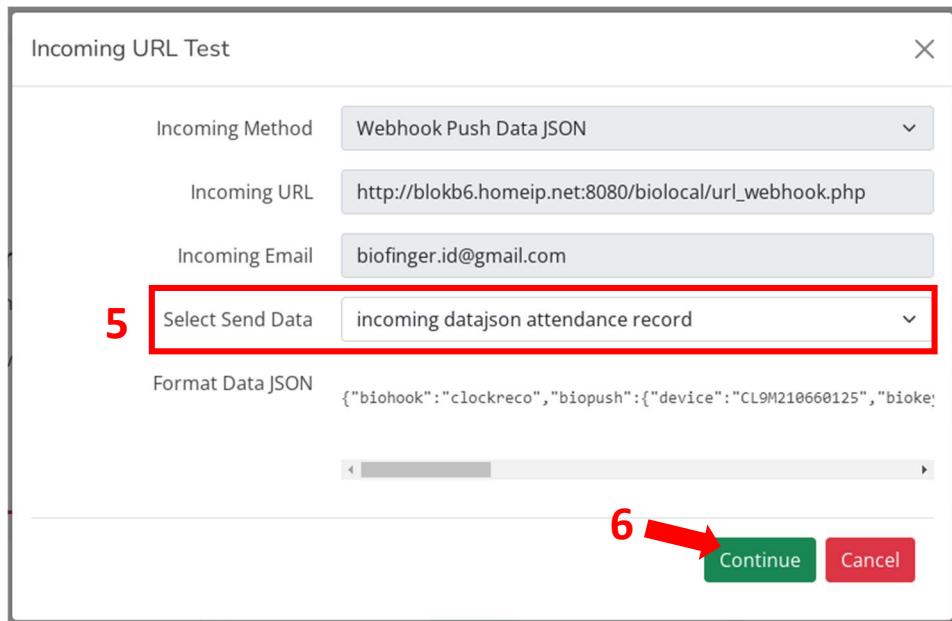

- Cek isi tabel "card\_hook" pada database kosong belum ada data masuk

3. Buka kembali menu “Device Configuration” -> Isi SN Mesin
4. Kemudian klik “Tombol Biru” disamping kanan Incoming URL

5. Pada Select Send Data Pilih “incoming datajson record kehadiran”
6. Kemudian klik tombol “Continue”

7. Jika data JSON dapat diterima oleh URL Webhook Server Anda, maka muncul popup “Sukses!”

8. Cek email akan ada notifikasi dari bioclock bahwa InComing URL Test Success

A screenshot of a Gmail inbox. The subject of the email is "InComing URL Test : Success". The sender is "BioClock Cloud &lt;bioclock.id@gmail.com&gt;". The email body contains the message "Hi, CQRT222160695", "Select Send Data : clockreco", "Incoming URL: https://bioclock.id/url\_webhook2.php", and "Format Data JSON: {"biohook": "clockreco", "biopush": [{"device": "CQRT222160695", "biokey": "KTCuOlKhXPskyUu", "verify": "15", "workcod": "", "is\_mask": "0", "bodyitem": "0.00"}]}".

9. Selanjutnya cek kembali Database Server Anda pada table “card\_hook” akan ada data JSON dari mesin yang berhasil terkirim

A screenshot of the phpMyAdmin interface. On the left, the database structure shows "Baru", "biolocal", "Baru", "card\_hook" (with a red arrow pointing to it), and "card\_reco". The main panel displays the "card\_hook" table with one row selected. The SQL query shown is "SELECT \* FROM `card\_hook`". The result table shows a single row with columns "tran\_dt" and "datajs". The "datajs" column contains the JSON data: "2024-01-15 11:10:14 {"biohook": "clockreco", "biopush": [{"device": "CQRT222160695", "biokey": "KTCuOlKhXPskyUu", "verify": "15", "workcod": "", "is\_mask": "0", "bodyitem": "0.00"}]}". A red box highlights this row.

10. Selesai
